  - Added facility to override default language behavior through feature selection
  - Added support for cv76 (dagger alef) on space, nbspace, and tatweel

### Improved

- Enlarged Arabic-style guillemet quotes
- Enhanced positioning of U+06E2 ARABIC SMALL HIGH MEEM ISOLATED FORM next to adjacent vowel marks
- Improved positioning of final YEH BARREE characters when preceeded by a character with two or three nukat below
- Improved alef+mark positioning to reduce collisions
- Improved madda reordering to comply with UAX #53

### Known issues

- Shaping for the newly added characters may not yet occur in applications.
- Medial and final high hamza characters may have collisions (these likely do not occur).
- Lam + high hamza alef ligature does not form as it likely does not occur.
- In Word: kerning of Arabic proportional digits is incorrect. This is a bug in Word.
- In InDesign: some behaviors, such as the *lam-alef* ligature, raised *kasra* with *shadda*, and subtending marks, will not function correctly unless **Ligatures** is turned on in the **Characters** panel.
